

Mid-Program Review

The 360° of Program Management

Bosch

27.Apr.2026

Introduction

The primary objective of this ppt would be to share application of the learnings in current/upcoming work situations. It is intended to drive reflection, application, and accountability

Some indicators:

Participant Name: Dinesh Kumar Rajendran (MS/ENE-VD3-XC)

Manager Name : Ganeshbabu C Venkatarathinam (MS/ENE-VD3-XC)

Role: Senior Project Manager / Product Manager

Function/Department: MS/ENE-VD

What is your job role? What activities does it involve?

- *End-to-end ownership of product and program management for cockpit / domain controller programs*
- *Planning, execution, risk & dependency management across multiple ARTs*
- *Budget, compliance, governance, and stakeholder alignment*
- *Translating customer expectations into executable team objectives*

Who is your customer? (e.g: Internal teams or external clients)

- *Internal: Vehicle ARTs, BEAT ART, HWP, X-Functional ARTs*
- *External: OEM customers*
- *Supplier: Vector, Infineon and Himax*
- *Internal: System, Hardware, Validation, Plant*

•Reflection (based on PMDP) : *In my current role, program success is no longer defined only by delivery, but by measurable benefits realization, stakeholder value, interdependency management, and adaptive governance.*

Module-wise Learning Application

Modules		Been able to apply	Identified areas to apply	No Scope to apply
Leadership	Leader in me	✓		
	Resilient Leadership	✓		
	Uncertainty Management	✓		
	Strategic Thinking & Creativity		✓	
Professional	Leading Cross-functional teams	✓		
	Negotiation Skills/Conflict Management	✓		

Note : Use the tick symbol to mark your relevant responses

Application of Learnings from Leadership Modules

Leader in Me

Top 2–3 learnings:

- Values → beliefs → behavior → results
- Awareness of personal biases and assumptions
- Emotional self-regulation before action

Application example:

Situation:

- Complex CDC delivery with budget pressure, safety dependencies, and multi-ART misalignment

Action Taken:

- Practiced conscious decision-making instead of reactive responses
- Focused on facts vs assumptions
- Applied upward empathy to understand stakeholder constraints

Outcome:

- Improved trust with ARTs
- Clearer prioritization
- Reduced friction in escalations

Application of Learnings from Leadership Modules

Resilient Leadership

Top 2–3 learnings:

- Staying composed under pressure
- Balancing delivery, quality, and people
- Turning constraints into structured actions

Application example:

Situation:

- Budget overbooking + hardware sample delays + compliance pressure

Action Taken:

- Structured risks and escalations
- Maintained steady communication with leadership
- Enabled team focus despite uncertainty

Outcome:

- Controlled escalations
- Team morale maintained
- Clear mitigation plans established

Application of Learnings from Leadership Modules

Negotiation & Conflict Management

Top 2–3 learnings:

- Interest-based negotiation
- Data-backed discussions
- Win-win mindset

Application example:

Conflict Situation:

- Effort / budget ownership across ARTs for SWE.6 & Diagnosis activities

Action Taken:

- Aligned discussions around program risk & compliance impact
- Used factual data (effort split, delivery risk, roadmap impact)
- Escalated constructively where required

Outcome:

- Partial budget alignment achieved
- Clear next steps defined
- Improved cross-ART collaboration

Application of Learnings from Leadership Modules

Leading Cross Functional teams

Top 2–3 learnings:

- Lead through influence, not authority
- Interdependency management is core to modern program management
- Clear governance (roles, rules, escalation paths) reduces friction
- Psychological safety and trust enable performance

Application example:

Situation:

- Delivery required alignment across Vehicle ART, BEAT ART, HWP, and X-Functional teams without direct authority

Action Taken:

- Coordinated across Vehicle ART, BEAT ART, HWP, and X-Functional teams
- Clarified dependencies, ownership, and sequencing
- Used structured dialogue and empathy to resolve conflicts

Outcome:

- Improved collaboration across ARTs
- Faster decision-making
- Stronger accountability and team engagement

Application of Learnings from Leadership Modules

Strategic Thinking & Creativity

Top 2–3 learnings:

- Shift focus from short-term activities to long-term value and benefits realization
- Think in systems, not silos—understand interdependencies and downstream impact
- Translate strategy into clear objectives and measurable outcomes (KPIs)
- Balance execution speed with strategic alignment and sustainability

Application example:

Situation:

- Managing a complex, multi-ART program with parallel demands on delivery, quality, compliance, and budget

Action taken:

- Applied a benefits realization mindset by linking delivery milestones to customer and business outcomes
- Used value-based performance measurement instead of only tracking outputs (features delivered)
- Aligned priorities across multiple ARTs by anchoring discussions on shared strategic goals
- Encouraged creative problem-solving by exploring alternative options and scenarios instead of fixed solutions

Outcome:

- Clearer prioritization of high-impact initiatives
- Improved alignment between strategy and execution
- More informed decision-making across stakeholders

Application of Learnings from Leadership Modules

Uncertainty Management

Top 2–3 learnings:

- Shift from certainty-driven planning to adaptive decision-making in **VUCA / BANI environments**
- Separate controllables vs. uncontrollable to focus energy effectively
- Use scenario thinking instead of single-path assumptions
- Apply fast feedback cycles (Observe → Orient → Decide → Act)

Application example:

Situation:

- Managing program delivery in an environment with high uncertainty due to changing requirements, hardware dependencies, budget constraints, and compliance timelines

Action Taken:

- Faced uncertainty due to hardware availability, budget dependencies, and compliance timelines
- Applied early risk identification and scenario-based mitigation planning
- Enabled structured and transparent communication to reduce ambiguity across stakeholders

Outcome:

- Improved predictability despite changing conditions
- Faster alignment and decision-making
- Reduced reactive escalations and firefighting

Action Plan (Next 30–60 Days)

3 specific actions you will take:

- Apply **VUCA/BANI** thinking and scenario planning early in program lifecycle
- Use **OODA** loop and system perspective for faster, better decisions
- Practice **empathy-driven influence while leading cross-functional teams**

How will you measure success?

- Fewer reactive escalations
- Better predictability in delivery & alignment
- Stronger stakeholder trust & team engagement

The background features a dark, textured surface with numerous diagonal lines running from the top-left towards the bottom-right. These lines are composed of small, glowing orange and yellow particles, giving the impression of a digital or scientific visualization. The overall effect is a sense of depth and movement.

Thank You
