

Mid-Program Review

The 360° of Program Management

Bosch

<18.04.2026>

Introduction

The primary objective of this ppt would be to share application of the learnings in current/upcoming work situations. It is intended to drive reflection, application, and accountability

Some indicators:

Participant Name: Gangadhar Shankarappa Hugar (MS/EAC1-XC)

Manager Name : Umesha Chennaiah (MS/EAC1-XC)

Role: SW Project manager

Function/Department: MS/EAC1-XC

What is your job role? What activities does it involve?

Project manager for SW which includes responsible for end-to-end delivery of complex, multi-stakeholder programs involving OEM customers, internal Bosch engineering teams, quality, compliance, and management stakeholders. My role includes project planning, risk management, stakeholder alignment, issue escalation, delivery governance, and ensuring business and quality outcomes.

Who is your customer? (e.g: Internal teams or external clients)

- CARIAD (External)

Instructions for the Program Reflection

Prework:

- Each participant is requested to reflect on their own work experience and **cite instances** where learning from the various modules in the program covered so far could be applied in real work-life situations to improve outcomes. Please include real examples and not generic statements
- Do call out at least one mindset shift you have experienced
- Please also present your learnings from coaching sessions
- Please feel free to make this **ppt creative, add animation, images etc** that will help you create a buy-in with the panellists.

Module-wise Learning Application

Modules		Been able to apply	Identified areas to apply	No Scope to apply
Leadership	Leader in me	✓		
	Resilient Leadership	✓		
	Uncertainty Management	✓		
	Strategic Thinking & Creativity		✓	
Professional	Leading Cross-functional teams	✓		
	Negotiation Skills/Conflict Management		✓	

Note : Use the tick symbol to mark your relevant responses

Application of Learnings from Professional Modules

Leaders in Me

Leadership credibility is built through ownership, consistency, and transparency,

Emotional intelligence, Empathy

My behavior under pressure directly impacts team confidence and execution

Clear priorities prevent downstream escalations

Real scenario:

► Conflict situation:

- Leading India software teams for ACA 4.x SaaP delivery with aggressive VW/CARIAD milestones across multiple variants, High delivery pressure with parallel releases, quality expectations (C/AU), and dependency on global teams created risk of last-minute escalations.

► Strategy used: Personally owned release governance and quality gates, Defined clear ownership for planning, defect closure, and customer communication, Used live quality metrics instead of subjective status

► Result:

- Delivered ≥ 5 SOPs/year across variants
- Achieved C/AU without audit findings
- Strengthened VW/CARIAD trust in India delivery capability

Application of Learnings from Professional Modules

Resilient Leadership

Calm leadership accelerates recovery during pressure

Focus on solutions, not blame, **cynefin module**, **coaching**

Team resilience depends on leader's stability

Real scenario:

► Conflict situation:

- Late-phase defect discovery and introduction of new static analysis rules (QAC 2.8) during ACA 4.x release phases

► Strategy used: Risk of timeline slippage and team stress due to increased warnings and defect load

► Result:

- 50% reduction in defect density (2024 → 2025),
- 50% reduction in QAC warnings
- Stable delivery with sustained team morale

Application of Learnings from Professional Modules

Uncertainty Management

Uncertainty must be converted into explicit, tracked risks

Early signaling reduces escalations

Scenario-based thinking improves predictability

Critical thinking models : VUCA, Bani, Cynefin etc.

Real scenario:

► Conflict situation:

- Evolving requirements, multi-variant dependencies, and third-party ECU integration in ACA 4.x SaaP model, Ambiguity in requirements and timelines threatened release predictability.

► Strategy used: Maintained structured risk register and Q-dashboards

- Regular QMM reviews with transparent risk communication, Scenario planning for alternate execution paths

► Result:

- 99.6% SWRS requirement coverage, 95–98% test success rates
- Minimal unexecuted requirements (<10 of >7300)

BoscReq Test Status

CustReq Test Status

of Req in total: **7312**
of Req Not Executed: **9**
of Req Not Specified: **21**
of Req Tested (pass+fail): **7282**

Requirement coverage:

89% success rate

Total Customer requirements: 15777

Relevant Customer requirements: 9995

90% success rate coverage of customer requirement

Burndown Chart Req to test Coverage

Continuous tracking of quality gaps for requirements and test regularly in BU/QMM reviews

Application of Learnings from Professional Modules

LEADING CROSS-FUNCTIONAL TEAMS

Alignment is more powerful than authority

Clear interfaces reduce friction

Transparency accelerates decisions

Real scenario:

► Conflict situation:

- Coordination across development, testing, QMM, OD/PJ-IF, and VW/CARIAD stakeholders.
- Different priorities across functions delayed decisions and increased friction.

► Strategy used: Established common delivery objectives, Enabled structured cross-functional forums, Used shared dashboards as single source of truth

► Result:

- Supported 8 variants from a single branch
- Effective coordination of ~150 global members (India ~40+)
- Faster alignment and reduced cross-team blockers

Collaboration with OD and VW - Cariad

This page gives the overview about how the collaboration will take place between VW – Cariad and various stakeholders (One Driving, PJ-IF, PIT etc.)

Action Plan (Next 30–60 Days)

3 specific actions you will take:

1. Strengthen risk-based release readiness & quality gates

Introduce sharper pre-release risk reviews based on defect trends, QAC warnings, and requirement coverage, Ensure early escalation of high-risk items before customer milestones

2. Further optimize automation & CI-driven quality visibility

Expand CI dashboards integrating test coverage, defect leakage, and requirement status, Use these dashboards as the single source of truth for customer and management communication

3. Coach and enable team leads on ownership & customer orientation

Mentor leads on data-driven decision making and customer communication, Delegate ownership of quality, risks, and delivery outcomes to strengthen team maturity

How will you measure success?

Reduction in customer defect leakage and late-phase escalations, Improved release predictability against committed timelines

Higher stability of quality KPIs (defect density, requirement coverage, test success rate), Positive feedback from VW CARIAD and internal stakeholders on India delivery ownership

The background of the slide is a dark, textured surface with a pattern of diagonal lines in shades of brown and gold. Overlaid on this pattern are numerous small, glowing digital characters and symbols, including letters, numbers, and punctuation, creating a sense of data or code. The overall effect is a high-tech, digital aesthetic.

Thank You
