

Mid-Program Review

The 360° of Program Management

Bosch

<Date>

Introduction

The primary objective of this ppt would be to share application of the learnings in current/upcoming work situations. It is intended to drive reflection, application, and accountability

Some indicators:

Participant Name: Sanjeev Kulkarni

Manager Name : Ajith Ajith

Role: SW Program Management

Function/Department: MS/ECV-XC

What is your job role? What activities does it involve?

SW project management of Electronic Horizon project – a telematics-based project for CVO business.

- PI Planning, Scheduling, Stakeholder Engagement, Resource Management, Billing & tracking

Who is your customer? (e.g: Internal teams or external clients)

- Both Internal and external clients

Module-wise Learning Application

Modules		Been able to apply	Identified areas to apply	No Scope to apply
Leadership	Leader in me	✓		
	Resilient Leadership	✓		
	Uncertainty Management	✓		
	Strategic Thinking & Creativity	✓		
Professional	Leading Cross-functional teams	✓		
	Negotiation Skills/Conflict Management	✓		

Note : Use the tick symbol to mark your relevant responses

Leader In Me

Upward Empathy

	Situation	Action Taken	Outcome
Compassionate	- PEARL Program BO proposed improving software security and reliability by introducing additional compiler warning W-flags - Though the intent was to enhance software quality; the proposal was met with significant resistance from the development team - Concerns about increased workload, potential delivery impact & disruption to ongoing tasks S1	- I acknowledged the team's concerns and created a safe space for open discussion. Ensuring they felt heard and respected - Rather than enforcing the change top-down, I empathetically explained why these warnings matter (Improved SW quality, long-term maintainability, reduced security risk, which ultimately also benefits the team) - To build confidence, collaborated with the team to define a phased execution plan - This approach respected the team's capacity while still aligning with the business objective	Through this balanced and empathetic approach, 350/790 identified security and reliability warnings are resolved in the first PI cycle - The team has begun pulling & addressing warnings in parallel without major disruption - Trust is strengthened between the team, business owner. Reinforcing a culture of quality and shared ownership Through compassionate empathy - listening, acknowledging concerns & co-creating solutions – Turned resistance into engagement while still delivering measurable business value
Cognitive	- Business situation demands accurate Target business plans (Deviation scope <= 2%) - Supported the Head of Engineering by taking over the activities related to the Target Business Plan, current forecasts, billing & financial tracking - This required coordination across multiple Engineering groups, each with different cross team setups and dependencies, while ensuring adherence to agreed financial targets. S2	Understood the operational constraints and planning of different engineering groups and aligned them with the expectations of the Head of Engineering - Proactively coordinated with engineering teams to ensure timely and accurate billing - Continuously tracked actuals versus the target plan (In case of deviations - I analyzed the root cause, assessed potential impact, reported) - I regularly aligned corrective or mitigation plans with the Head of Engineering to maintain control over forecasts and targets	- Ensuring decisions are made based on data, context & realistic execution capacity - Improved predictability and transparency in financial tracking. Strengthened decision-making support for the Head of Engineering - Work is well acknowledged by HOE By understanding both leadership expectations and operational constraints of engineering teams, I enabled proactive financial governance and ensured sustained alignment with business targets.

Leader In Me

Leadership Styles - Blake Mouton Management Grid

		Situation	Action Taken	Outcome
Concern for	PEOPLE	1. PEARL Program Pilot - Introduction of additional compiler security and reliability W-flags 2. Strong resistance from team due to perceived effort and delivery risk	1. Understood and acknowledged team resistance 2. Created space for dialogue instead of top-down enforcement 3. Addressed concerns by proposing a phased, realistic approach	1. 350 / 790 warnings fixed in the first PI cycle 2. Team proactively started pulling topics in parallel 3. Quality improved without morale degradation
	TASK	3. Introduction of W-flags resulted in more compiler warnings which must be fixed S1	1. Clearly articulated quality, security and long-term maintainability benefits 2. Defined a structured execution plan 3. Ensured business expectations were still met	→ Grid Position: Team Management (9,9) Balanced empathy with measurable delivery

Resilient Leadership

Strengthening Mental Fitness

	Situation		Action Taken		Outcome
R e o r g	1. Multiple reorganization took place which called for new ways for working / adaptability 2. System Test & Map tooling teams partially moved out S3		1. Adapted to organizational change involving new structures, roles and interfaces 2. Engaged with new stakeholders and communication channels		1. Increased adaptability and cognitive flexibility ✓ Key capability built: Change agility & resilience
L e a r n i n g	1. AI is no longer optional in modern project environments 2. Learn AI & apply in project / program, be future ready S4		1. Invested in structured learning programs (PMDP) to enhance leadership and project/program management skills 2. Explored AI-related learnings, application in project / program		1. Strengthened growth mindset 2. Resilience / openness in learning new things ✓ Key capability built: Learning agility & mental endurance
B e y o n d	1. Took additional responsibility of Target business planning inclusive billing & monitoring to support HoE in better decision making S2		1. Took on responsibilities outside the traditional comfort zone (Business planning) 2. Shifted focus from task execution to system level and cross team thinking		1. Increased tolerance for complexity and pressure 2. Strengthened decision making under uncertainty ✓ Key capability built: Mental toughness & leadership maturity

Resilient Leadership

Impact of Social Connects

	Situation		Action Taken		Outcome
ECV1 Connect	1. With the recent reorganizations team members have moved to Horizontal organization 2. Members are reporting to different managers S3		1. Created an inclusive platform for sharing updates, ideas & challenges 2. Improved clarity on priorities, plans & expectations 3. Enabled timely information flow across teams 4. Strengthened connection beyond immediate teams		✓ Collaboration & Inclusion ✓ Communication & Transparency ✓ Team Cohesion
Lunch Time with	1. Some of the members in the team are shy, reserve and don't engage in conversations easily S5		1. Built rapport through informal, inclusive interactions 2. Improved approachability and mutual respect 3. Provided a safe, informal space for candid conversations 4. Ensured all voices are heard, regardless of role		✓ Trust & Relationship Building ✓ Empathy & Listening ✓ Inclusive Leadership

Strategic Thinking and creativity

OKRs (Objective and Key Results) Framework

Enhancing integration efficiency through intelligent data management

AI-BASED KNOWLEDGE BASE FOR CVO INTEGRATIONS @ ECV

OBJECTIVES

- 1. Build an AI-based, scalable knowledge base for CVO Integrations at ECV
- 2. Assist existing & new integrators with faster, reliable access to integration knowledge
- 3. Enable long-term knowledge retention and reuse
- 4. Leverage AI effectively with ease of use & cost efficiency

KEY RESULTS

- 1. Integration Knowledge Base available as a Virtual Assistant
- 2. 24/7 availability with high reliability
- 3. ≥70% of common CVO integration use cases handled by AI
- 4. Positive user experience (easy to use, minimal training required)
- 5. Knowledge base updated periodically and remains relevant
- 6. Low operational & maintenance cost

INITIATIVES

- 1. Conduct AI awareness & hands-on trainings
- 2. Explore AI tools & platform capabilities
- 3. Identify and structure CVO integration data sources
- 4. Feed data, observe results & refine
- 5. Execute pilot, then extend to multiple projects
- 6. Promote adoption and gather continuous user feedback

S6

X-Type Matrix

Uncertainty Management

PESTLE

S8

P – Political (Organizational / Governance Factors)

- Recent organizational re-structuring moved integrators into the SWC group, limiting direct deployment flexibility
- Internal Job Rotation policies enabled Nishxxxxx move to VM area, impacting immediate integration capacity
- Cross-area dependency required alignment between ECV, SWC and VM leadership
- Decisions required consensus-driven negotiation, not unilateral action

E – Economic (Cost & Resource Efficiency)

- Sudden attrition risked higher indirect costs (delivery delays, rework)
- External hiring or fast backfilling would incur time and onboarding cost
- Using 25% capacity support from Nishxxxxx optimized cost while maintaining continuity
- Leveraging internal successor from SWC avoided additional staffing expenses

S – Social (People & Workforce Factors)

- Loss of 2 integrators and transition of the 3rd created continuity risk
- Knowledge concentration on a small team amplified single-point-of-failure exposure
- Gradual transition supported knowledge transfer and reduced stress on remaining teams
- Collaboration across teams demonstrated people-centric leadership

PESTLE

T – Technological (Capability & Knowledge Continuity)

- Integration activities require specialized, domain-specific knowledge
- Sudden resource loss risked disruption to technical integration workflows
- Short-term continued involvement of Nishxxxxx ensured:
- Maintained stability of integration processes during transition

L – Legal (Policy & Compliance)

- Internal Job Rotation and re-deployment complied with Bosch HR policies
- Resource support agreement respected capacity allocation norms (25%)
- No contractual or compliance violations introduced through temporary support model

E – Environmental (Operating Environment / Organizational Stability)

- Rapid successive changes created a volatile operating environment
- Limited reaction time increased exposure to delivery and business continuity risks
- Hybrid support model provided organizational resilience
- Enabled smooth stabilization until successor fully ramps up

The situation was influenced by organizational restructuring and people movements, mitigated through cross-team collaboration, cost-effective interim support and a structured knowledge continuity approach.

Leading Cross Functional Teams

Team Canvas

S6

AI Knowledge Base for CVO Integrations @ ECV

Purpose

- AI-driven,
- scalable virtual integration knowledge base
- for CVO projects @ECV

Success Criteria

- 24/7 availability
- ≥70% queries
- Positive UX

Ways of Working

- Pilot → Learn → Scale
- Feedback driven

Objectives

- Support integrators
- Retain knowledge
- AI Usage

Roles

- Project Integrators
 - Nishxxxx
 - Ravixxxx
- Pilot Users

Risks

- Outdated data
- Low adoption
- AI trust

Stakeholders

- CVO Integrators
- Project Teams
- Tech Leads

Resources

- CVO project[s] documents [IPPC, CTP3, CTP2....]
- AI tools – DIA Brain
- Integration Teams Channel

Principles

- User-first
- Trust but verify
- Outcome focus

Leading Cross Functional Teams

Influencing without Authority - Cohen-Bradford Influence Model

S6	Situation	Action Taken	Outcome
	1. Collaboration with multiple stakeholders across groups for building ECV Integration Knowledge base 2. Focus on relationships as authority doesn't exist	1. key stakeholders identified 2. Objectives Prioritized 3. Understood the situation 4. Use-cases that matters identified 5. Ideas exchanged	1. Key Stakeholder register

Key Stakeholder Register

Influencing Scenario	Stakeholder	Reasons to Influence	Challenges	Perception
No to standalone tools for running LLM's (OLLAMA)	Rahul	Maintaining local Tools/ LLM would be expensive on longer run	Compliance, Data Integration, Maintenance	Standalone LLM tools may work for short-term experimentation From a compliance, integration and lifecycle perspective - they introduce hidden cost and risk that enterprise platforms are designed to eliminate.
Usage of AI enterprise tools	Nishxxxx	Usage of AI in projects, out of the box perspective	New to AI, License for exploration of AI Tools	Enterprise AI tools offer a safe, supported way for teams new to AI to learn, experiment, and apply out-of-the-box thinking in projects—without increasing delivery or compliance risk
Demonstration of ECV Integration Virtual assist using DIA Brain	Deepa	Technical lead who is finally evaluating and providing go ahead	Why DIA Brain tool? What are the advantages?	DIA Brain allows us to deliver a compliant, scalable ECV Integration Virtual Assistant without building or maintaining our own GenAI stack, while integrating seamlessly into existing Bosch systems

Negotiation Skills / Conflict Management

BATNA & ZOPA (ACCM 2.0 Skill Mapping - MAP Tooling Team)

S9

BATNA

Context:

BGSW ACCM2.0 mandated recording skillsets in the Degreed tool by 15-April-2026.

Pre-defined role-based skill mappings did not adequately cover MAP Tooling team skillsets, creating a risk of incorrect representation or non-compliance with deadline

My Primary Objective (Preferred Outcome)

Include MAP Tooling–specific skillsets under the relevant role in Degreed

Ensure accurate skill representation while still meeting the ACCM2.0 compliance requirement

BATNA (Best Alternative to a Negotiated Agreement)

Proceed with partial but compliant skill mapping by recording min. 5 core skillsets in Degreed before the deadline and defer the remaining MAP Tooling–specific skillsets until the role update process is completed.

ZOPA

Negotiation Outcome (Better than BATNA)

Through negotiation with:

Technical Director → approval for additional MAP Tooling skillsets

Degreed Tool Responsible → phased implementation approach

Agreed to:

Configure 5 key skillsets immediately

Add remaining skillsets once processing completed

This achieved a solution equal to or better than BATNA, without compromising accuracy or governance.

Negotiation Skills / Conflict Management

Leverage your BATNA

Context

- Integration team size: 3 members
 - 2 integrators resigned
 - Third Integrator (Nishxxxx) opted for Internal Job Rotation to VM area
 - All changes occurred within a very short span, leaving no reaction time
 - Due to recent re-orgs, integrators are now with SWC group
 - No readily available integrators for quick deployment
- This situation posed a high delivery and continuity risk for integration activities

S8

Primary Objective

- Ensure continuity of integration support
- Enable smooth transition to a new successor
- Minimize delivery risk during a critical resource gap

BATNA (Best Alternative to a Negotiated Agreement)

If immediate full-capacity integration support could not be secured:

Proceed with a hybrid support model where:

- An SWC integrator is identified as the successor
- Nishxxxx continues to support integration activities at 25% capacity during the transition period, while the successor ramps up

Competencies Demonstrated

- Risk mitigation under constrained conditions
- Stakeholder negotiation across departments
- Pragmatic decision-making
- Knowledge continuity management
- People-centric leadership during transitions

Why this BATNA Was Viable

- ✓ Business continuity ensured despite sudden attrition
- ✓ Knowledge retention preserved during transition
- ✓ Risk of single-point failure reduced
- ✓ No delay to critical integration deliverables

Negotiation Outcome

- Agreement with VM Area Manager for 25% capacity support from Nishxxxx
- Identification of an SWC integrator as successor
- Balanced priorities between ECV integration needs and VM resource planning

Action Plan (Next 30–60 Days)

3 specific actions you will take:

1. Usage of AI in project / Program management
2. Application of concepts learned in PMDP program
3. Mindset shift -> Project as leader, influence changes

How will you measure success?

1. Explorations of enterprise AI tools and learnings from them
 1. Use cases identified and pilot / realization in project
 2. Topic demonstrations / Presentations at department level
2. Concepts applied in project / program management and relevant artifacts maintained
 1. Feedback of Mid Term & Final assessments
3. Change in thought process, strategic thinking, self reflection, Contribution dialog (feedback)

The background features a dark, textured surface with numerous diagonal lines running from the top-left towards the bottom-right. These lines are composed of small, glowing orange and yellow particles, giving the impression of a digital or scientific visualization. The overall effect is one of depth and movement.

Thank You
